Comments:

Please review the attached proposal which would place this application in condition for allowance. Two issues: I am directing the claims to the specific material, i.e., bars or rolls, and to the specific hydraulic presses, i.e., cold.. As now set forth, the combination of the size of the material and this material being directed to either bars or rolls (wire) in conjunction with the cold hydraulic presses would appear to result in the disclosed objectives, i.e., lower shaping temperatures imparted to the material during processing. Further, I am deleting the limitation to the controlling of the presses to less than 700 degrees during processing as this is not specifically described in the original spec., even though an object is to perform the operations below this temperature. However, there is no disclosure for the "controlling" of this temperature. Please get back to me as soon as possible so that we might resolve these issues.
